

About Virtual Office

A Dynamic And Progressive Company

Based in Mesa, Arizona, Virtual Office was founded in 2009. The company's core product was designed to overcome specific insufficiencies in the market – primarily, the need for an all-in-one solution that was user-friendly and capable of meeting stringent security and regulatory requirements. It was quickly evident that the robust and scalable product we designed could revolutionize business as we know it. Virtual Office offers a secure, cloud based alternative to conventional networking infrastructures.

Our platform integrates many of the components of today's most advanced business infrastructures and combines them into one secure and easy to use web resource. Because our entire system is cloud based, it can be accessed from any Internet connected device anywhere in the world.

Targeted Business Solutions

Virtual Office is a dynamic and progressive company with clear objective – to provide our clients with innovative and cost-effective business solutions through the efficient deployment and integration of information technology. Our organization brings together a multi-disciplined team able to undertake every aspect of IT consultancy, infrastructure design, installation and ongoing support.
